

# MOULD CHUTES & CURTAINS

**Mould Chutes & Curtains** stop your mouldings scattering randomly in the “drop zone”. They ensure your parts land on your conveyor or in your packing case and not on the floor.

*Mould Chutes* are made of durable plastic and are of rugged construction. The inserted hard PVC lining in the bottom is held in place with nylon screws that protect even the most delicate moulding. The unique construction will not absorb oil or grease and is abrasion, puncture, and tear resistant. Each *Mould Chute* is easily cleaned using simple household cleaners. There are no concertina folds to trap mouldings or dirt. They come in 18 standard sizes with in-line or side exit delivery chutes. We also offer Tapered Mould Skirts for when you don't need a chute but still require protection from contamination and loss.

*Mould Curtains'* crystal clear plastic curtain allows you to observe your moulding area, and monitor your parts whilst production is in progress. As the mould opens and closes the curtain unwinds and recoils itself with each cycle preventing spillage of parts. *Mould Curtains* are quickly and easily attached and removed so they can be moved from one press to another to meet changing production demands.

- **Reduces Scrap**
- **Easily Installed**
- **Eliminates Contamination**
- **Quick Access to the Mould**
- **Increases Profits**
- **Moveable to Other Presses**

If one of our standard size chutes, skirts or curtains won't meet your needs, or if you require a special tapered mould skirt, we will make them any size you want. For vertical presses, where you might need to enclose 3 sides of your mould, we have special kits to meet your application. For special application information phone our technical support hot line and request your free installation guide and user notes.

MS-50	20"		24"			
MS-60	24"		24"			

All items are available in both metric and imperial sizes. Please ask for our data sheet and price list for full details.

### Installation

Easy to install and remove

Simple assembly of hardware and magnets is required

Magnet with locating post is positioned on the outer edge of the mould

Chutes attach to the magnet using Velcro

Curtain Attachment Handle latches onto the magnet locating post

For larger sizes curtains can be stacked one on top of the other.

Install a spacer between the magnet and curtain when using an air blast during mould opening (allowing air to enter the vortex that is created & prevent the shield being pulled into the mould open space)

### Chute Kit Contains

One Mould Chute

Mounting hardware

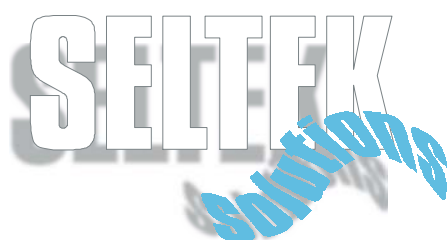

Required number of attaching magnets for the Chute

### Curtain Kit Contains

Two Curtains

Mounting hardware

Required number of attaching magnets for the Curtain size
